Hey I was thinking that I have a dynamic range of values that I am sending into a signal. Is it possible to send in these values without knowing how many there are? My example is, say that I have a conveyor belt system and that I have motors that move the belt. These motors have a signal attached to them to tell the controllers that they are active and that the belt should be moved at a speed. Now these systems are being updated with new motors and I have not the slightest clue how many motors I am going to have, that I need to send signals to. I'm wondering if there is a way to send in the values from 0-255 that represent the signal.

Any thoughts? A: Couldn't you just write a function that takes a bit number and returns a signal for that value? Such as if (

Category:Zombie video games Maureen Clough Maureen Clough (born 1947) is a former public official from the state of Alabama. She has been a Democratic Party official since 1985 and has been a member of the Alabama House of Representatives from the district 10 since 1993. Political career Clough first entered politics in 1985 when she was elected to the Alabama State Senate. She was chosen as the Democratic nominee in the August 1990 primary against Republican incumbent Clyde Johnson, and defeated him in the general election with more than 65% of the vote. She was re-elected in 1992, 1994, 1996, 1998, and 2000. Clough and her husband, Ralph, had two children, Doug and Laura. Clough is a member of the Church of the Nazarene and attended the Nazarene Bible College in the 1970s. External links Maureen Clough at Alabama

Despite its potentially detrimental consequences for individuals' health and well-being, empirical studies evaluating the association between the severity of pain and psychological and somatic symptoms in prison populations are still scarce. The present study aimed to examine whether subjective and/or objective pain severity differ across categories of psychological and somatic symptomatology among male inmates of a maximum security penitentiary in Australia. The data of 921 inmates were examined. Regression analyses showed that bodily pain and other somatic symptoms decreased and psychological pain and anxiety and

depression increased significantly as a function of both objective and subjective pain severity.Q: f678ea9f9e
